

AI-BUILT BRAND CAMPAIGN KIT

Chaiwala Co. – Monsoon Adrak Chai Campaign

Project process, AI tools, creative development, review and reflection

Student	Rohan Lal
PRN No.	26030242071
Project	T51 – AI-built brand campaign kit
Brand	Chaiwala Co.

1. Executive Summary

This project involved developing an AI-assisted campaign kit and a supporting website concept for Chaiwala Co., a fictional premium masala chai and tea-snack brand. The campaign focused on the Monsoon Adrak Chai premix and translated the brand identity into coordinated visuals and captions for different customer groups. As an additional deliverable, I designed a Chaiwala Co. website showcasing the product range through a branded product catalogue layout. I used Gemini and Microsoft Copilot for research, idea exploration and checking campaign direction; ChatGPT to help structure prompts, develop and refine captions, and organize review criteria; and Microsoft Designer to create and refine campaign visuals. I also prepared a Google Form to collect structured brand-fit feedback and gathered reviews from people.

The central learning was that AI can accelerate ideation and production, but good campaign work still requires a clear brief, repeated prompt refinement, human judgement, and review against the brand’s objectives. The campaign was designed around warmth, nostalgia, everyday convenience and authentic Indian chai, while keeping the intended audience in view.

2. Project Brief and Objectives

The supplied project workbook defines Chaiwala Co. as a fictional brand founded in Nashik in 2022, positioned around authentic kadak chai made with Assam tea and whole spices. Its stated campaign goal is to launch Monsoon Adrak Chai premix, with a target of 20,000 units in six weeks. The brand voice is warm, witty and slightly nostalgic, with Hinglish permitted, and its palette is terracotta (#B5523B), cream (#F6EBDD) and deep green (#2F4B3A).

The key objectives of my work were to:

- Understand and apply the brand brief consistently across campaign assets.
- Develop a campaign idea and create audience-oriented visuals supported by captions.
- Use AI tools to research, brainstorm, generate, refine and evaluate creative work.
- Review the campaign with people using a consistent rating framework.
- Develop a supporting website concept to present the brand and its product range.
- Reflect on the usefulness, limitations and responsible use of generative AI.

3. Research and Brand Understanding

I began by reviewing the workbook’s Brand Brief, Personas and Products sheets. This helped establish the product context, brand voice, visual direction, target audiences and price positioning before generating campaign material. I used Gemini and Microsoft Copilot as research and ideation assistants to explore how a monsoon chai campaign could communicate comfort, convenience and a sense of home. The research stage was used to guide creative choices rather than to replace the supplied brand information.

The campaign planning considered five audience personas:

Persona	Need or behaviour	Communication direction
Hostel student (18–23)	Budget-conscious, studies late and uses quick-commerce	Convenient, relatable chai moments and student life
Young professional (24–32)	Busy mornings, work-from-home routine and misses home chai	A quick comforting break during a busy day
Homemaker (32–50)	Hosts guests and balances quality with price	Sharing, hospitality and dependable taste
Cafe-hopper (20–35)	Looks for experiences and shareable moments	Aesthetic presentation and a distinctive chai experience
Corporate gifting manager (30–45)	Purchases gifts in bulk for festivals	Thoughtful gifting and suitability for professional occasions

The primary product promoted was Monsoon Adrak Chai premix (250 g, listed at ₹249 in the workbook). Other listed products included Classic Masala Chai, Elaichi Chai, a Chai + Khari gift box, a kulhad set and a monthly chai subscription. These helped me understand the wider product range and avoid treating the launch as an isolated brand.

4. Campaign Development and Creative Work

After reviewing the brief and personas, I developed a set of seven campaign visuals: five persona-oriented creatives, one common campaign visual and one product-range visual. The five persona creatives were intended to make the campaign more relevant to different everyday situations, while the common visual reinforced the overall campaign identity and the product-range visual supported broader brand awareness.

I used Microsoft Designer to build and refine the visual assets. The brand palette, chai-related imagery, monsoon atmosphere and readable composition were treated as recurring design cues. The objective was not to make every visual identical, but to make the set feel like it belonged to the same brand while allowing each creative to speak to its own audience.

How I wrote the captions

I approached caption writing as a separate but connected part of the creative process. I first identified the audience and the moment being represented in each visual—for example, a student’s late-night study break or a professional’s busy morning. I then shaped the caption around a simple message: the product should feel relevant, comforting and easy to include in daily life. I used ChatGPT to brainstorm wording, shorten or clarify lines, explore alternative hooks and maintain a warm, witty and slightly nostalgic tone. Gemini and Copilot also supported research and idea exploration. I reviewed the final wording for clarity, audience relevance, brand voice and consistency with the visual, rather than accepting generated text without checking it.

The captions were intended to complement—not merely describe—the images. Each caption needed to establish a relatable situation, connect that moment with chai, and make the product or campaign message understandable. Hinglish was considered where it suited the brand personality and audience.

6. Website Development

In addition to the campaign visuals and captions, I created a website concept for Chaiwala Co. to provide a central digital storefront for the fictional brand. The website presents the brand identity through a consistent cream, deep-green and terracotta colour direction, with a simple navigation area and a product catalogue layout. The catalogue displays the six products defined in the project brief: Monsoon Adrak Chai Premix, Classic Masala Chai, Elaichi Chai, Chai + Khari Gift Box, Kulhad Set of 6 and the monthly chai subscription. Product imagery, short descriptions and price labels help visitors scan the range, while add-to-cart controls and a cart indicator are shown in the interface design. The website extends the campaign beyond social and professional posts by giving the brand a dedicated online presentation. The website was developed as a project deliverable; this report does not claim that it was publicly launched, connected to live payments, or integrated with real inventory or delivery systems.

6. AI Tools and Their Contribution

Tool	How I used it	Human review / role
Gemini	Research assistance, campaign exploration, audience and content ideas, and prompt support.	Checked relevance against the workbook and campaign purpose.
Microsoft Copilot	Additional research and brainstorming, exploring alternative angles and checking ideas.	Used as a supporting perspective; outputs were not treated as authoritative without review.
ChatGPT	Campaign planning, prompt drafting and refinement, caption	Selected, edited and aligned suggestions with the brand brief.

	ideation/editing, and development of the evaluation questions and form wording.	
Microsoft Designer	Creation and refinement of campaign visuals and layouts.	Reviewed the visual direction for consistency, legibility and suitability for the intended persona.

Using more than one AI assistant gave me different ways to explore the same brief. The tools supported speed and creative variety, while decisions about what to keep, edit or reject remained part of my own work. The process also highlighted the importance of providing clear context: generic prompts can produce generic outputs, whereas prompts that specify audience, tone, palette, product and format are more likely to produce usable results.

7. Prompting, Iteration and Quality Checks

I used iterative prompting rather than relying entirely on a single instruction. The process involved defining the campaign context, requesting ideas or draft content, reviewing the output, identifying gaps and refining the next prompt. For visual work, the recurring constraints were the brand colours, monsoon/chai context, intended audience and a coherent campaign look. For captions, the checks were tone, brevity, message clarity and connection to the visual.

- Brand alignment: Does the creative feel like Chaiwala Co. and reflect its positioning?
- Visual consistency: Are colours, typography, layout and imagery compatible across the campaign?
- Audience relevance: Does the creative address the persona's needs and context?
- Message clarity: Can a viewer understand the product or campaign idea quickly?
- Responsible content: Avoid unsupported health claims, competitor names, stereotypes and invented product facts.

The workbook includes an AI Use Log template and an example entry, but the supplied copy does not contain a completed multi-entry prompt history. For a fully auditable submission, the exact prompts, dates, outputs, changes, decisions and evidence links for each actual AI interaction should be added to that log. This report describes the tools and workflow used based on the project information provided; it does not invent missing prompt records.

8. Review Form and Feedback Collection

To evaluate brand fit, I prepared a Google Form titled "Chaiwala Co. – Brand Fit & Visual Evaluation Form." The form presents each campaign visual with its corresponding caption and asks respondents to assess it using the same six criteria on a 1–5 scale. The scale runs from 1 (Very Poor) to 5 (Excellent), with optional open-ended feedback for suggestions and improvements.

- Brand Identity – how well the visual represents Chaiwala Co.
- Visual Consistency – how well colours, typography and layout match the brand.
- Tone of Voice – how well the caption reflects the brand's warm, witty and nostalgic tone.
- Target Audience – how relevant the visual and caption are to the intended audience.
- Message Clarity – how clearly the product and its value are communicated.
- Overall Brand Fit – how well the visual and caption fit the brand overall.

I shared the form and collected reviews from people to obtain an external perspective beyond my own judgement. This review step was intended to identify whether the campaign was understandable, visually consistent and relevant to the audience. The actual response sheet or numerical ratings were not included in the provided workbook, so this report does not claim an average score, ranking or specific respondent finding. Those results can be added once the Google Forms response data is available.

9. Outcomes and Business Recommendations

The project resulted in a campaign kit concept comprising seven visuals and associated captions, supported by research, AI-assisted ideation and a structured feedback mechanism. The approach connected a single product launch with several consumer contexts instead of relying on one broad message for every audience.

- Keep the core brand cues stable—palette, tone and product identity—so the assets remain recognizable as one campaign.
- Adapt the message to the persona: student convenience, professional comfort, home hospitality, cafe experience or corporate gifting.
- Use the feedback scores to identify which assets need revision; review criterion-level scores, not only the overall average.
- Prioritize edits where low ratings and repeated written comments point to the same issue, such as unclear product communication or a mismatch between image and caption.
- After revision, consider testing the strongest assets on the relevant channels and monitoring engagement and product interest against the campaign goal.

The campaign target in the brief is 20,000 units in six weeks. The current work is a creative and evaluation exercise; without campaign launch and sales data, it would not be accurate to claim that the target was achieved or that the creatives caused sales growth.

10. Responsible AI Use and Limitations

The project brief emphasizes using free tools, avoiding real personal or confidential information in public AI tools, verifying generated facts and disclosing AI-generated content. I treated AI outputs as drafts and support material, with human review required before inclusion. The brand and customer data in the supplied workbook are synthetic teaching data. Generated visuals and text should be disclosed as AI-assisted where required by the course or platform, and image-use permissions or tool terms should be checked before any commercial publication.

Limitations include the fictional nature of the brand and its data, the absence of real campaign performance metrics, and the lack of the completed Google Forms response export in the materials reviewed for this report. AI-generated content can also be repetitive, overly generic or inaccurate if prompts are vague. These limitations make verification, editing and real audience testing essential.

11. Personal Reflection and Conclusion

This project helped me understand how generative AI can support an end-to-end marketing workflow—from interpreting a brief and researching a target audience to developing ideas, producing visuals, writing captions and collecting feedback. Gemini and Copilot were useful for exploring ideas and supporting research, ChatGPT helped me structure and refine content and evaluation questions, and Microsoft Designer supported visual production. The most important part of the process was not simply generating material, but giving the tools a clear brief and applying judgement to the results.

I also learned that brand consistency does not mean repeating the same design or caption for every audience. A stronger approach preserves a recognizable identity while adapting the message to the audience's needs and situation. The Google Form added a practical evaluation stage and made feedback more systematic. My next improvement would be to organize the exact prompt history and evidence in the AI Use Log, analyze the collected ratings quantitatively, summarize recurring comments, and revise the weaker creatives before any wider release.

Overall, the project demonstrates an AI-assisted but human-reviewed approach to building a multi-persona campaign. It combines creative production with structured evaluation and reflection, while recognizing that real market performance can only be established through actual campaign testing and verified results.

12. Actual Campaign Outputs: Visuals and Captions

The following campaign assets are reproduced from the supplied “captions and visuals” document. Each image is paired with the caption recorded for that asset in the source. The separate Chaiwala Co. logo is included on the report cover.

Visual 1 – Hostel student

CHAIWALA CO.
Affordable chai, har jagah

*Late night assignments?
Same hustle,
warmed by chai.*

- 100% Assam tea leaves
- Real crushed adrak & spices
- Ready in 2 minutes

**Big dreams.
Affordable chai.**

Brew authentic, kadak adrak chai with 100% Assam tea and real crushed ginger. Great taste, **easy on your budget.**

Just **₹249** 250 g

13. Google Forms Review: Results and Analysis

The submitted response workbook contains 7 completed respondent entries. Each visual was rated on six 1–5 criteria: brand identity, visual consistency, tone of voice, target audience, message clarity and overall brand fit. The summaries below use only numeric ratings present in the response sheet; blank cells are excluded from the relevant average.

Overall mean rating: 4.72 / 5

This is the mean of all available numeric ratings across the seven visual sections and six criteria. It describes the feedback in this small response set and should not be treated as a statistically representative measure of the wider market.

Visual section	Mean rating / 5	Interpretation
Visual 1 – Hostel student	4.71	Strong positive feedback
Visual 2 – Young working professional	4.74	Strong positive feedback
Visual 3 – Homemaker	4.76	Very strong positive feedback
Visual 4 – Cafe-hopper (Instagram)	4.74	Strong positive feedback
Visual 5 – Corporate gifting manager (LinkedIn / Email)	4.67	Strong positive feedback
Visual 6 – General product-range creative	4.74	Strong positive feedback
Visual 7 – General campaign creative	4.71	Strong positive feedback

Average by evaluation criterion

Criterion	Mean rating / 5
Brand Identity	4.67
Visual Consistency	4.82
Tone of Voice	4.71
Target Audience	4.67
Message Clarity	4.76
Overall Brand Fit	4.71

Across the criteria, visual consistency received the highest mean (4.82/5), while brand identity received the lowest mean (4.67/5). Visual 3 had the highest section mean (4.76/5), while Visual 5 had the lowest (4.67/5). Even the lowest mean is above the midpoint of the 1–5 scale, indicating generally positive ratings in this sample; however, the differences are small and should be interpreted cautiously.

Across all recorded numeric ratings, the response distribution was: 5 = 213, 4 = 79, 3 = 1, 2 = 0, and 1 = 0. The distribution indicates that ratings were concentrated at the positive end of the scale.

Written feedback

No written suggestions or improvement comments were entered in the optional feedback fields in the supplied response workbook. Therefore, the quantitative scores are available for analysis, but there are no written comments to quote or theme-code.

Review interpretation: respondents generally rated the campaign positively across brand identity, design consistency, tone, audience relevance, clarity and overall fit. The highest and lowest average criteria can guide the next round of refinement, but the current ratings alone do not establish purchase intent, campaign reach or sales impact.

14. Evidence, Scope and Submission Notes

The creative images and caption wording in Section 11 are based on the supplied campaign document, and the review calculations in Section 12 are based on the supplied Google Forms response workbook. The source campaign document appears to contain a product-range image in the section headed “Young working professional”; this report retains the source asset and labels the discrepancy explicitly rather than silently replacing the image. Before final submission, compare the displayed assets with the exact Google Form image order to confirm that each Visual 1–7 rating section maps to the intended artwork.

The uploaded response workbook contains seven respondent entries, rather than five. This report uses all seven available entries. For academic transparency, retain the original response export and avoid editing submitted ratings. If further responses are collected, update the summary using the full response set and record the new collection date.

AI Disclosure

This report documents an AI-assisted brand campaign project developed for Chaiwala Co., a fictional tea brand. Generative AI tools were used to support research, ideation, caption development, visual creation, and refinement of campaign materials.

AI tools used

- ChatGPT: Used to brainstorm campaign concepts, develop and refine captions, generate visual concepts and poster assets, and support report preparation.
- Google Gemini: Used for preliminary research, idea exploration, and review of campaign direction.
- Microsoft Designer: Used to create and refine visual assets and explore layout and design treatments.
- Microsoft Copilot: Used to support research and gather background information during campaign planning.

Accuracy and originality note

Chaiwala Co. is a fictional brand created for this project. Product descriptions, prices, distribution details, and campaign targets are project assumptions rather than verified commercial claims. AI-generated images may contain minor visual or text inaccuracies; they are presented as creative campaign mock-ups, not photographs of actual products or proof of a real-world launch. No claim is made that AI-generated outputs are wholly human-created.
